

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1-43. (Canceled)

44. (Currently Amended) A tissue ablation device ~~for ablating a circumferential region of tissue associated with an orifice of a vein that carries blood to an atrium,~~ comprising:

a member ~~adapted to be positioned adjacent to the~~ defining an expanded size and shape that corresponds to a circumferential region of tissue associated with an orifice of a vein that carries blood to an atrium; and

an ablation element associated with the member and adapted to form a lesion in a substantial portion of the circumferential region of tissue associated with an orifice of a vein that carries blood to an atrium.

45. (Canceled)

46. (Currently Amended) A tissue ablation device as claimed in ~~claim 45~~ claim 44, wherein the size and shape ~~is adapted to engage the tissue surrounding~~ corresponds to one of a superior vena cava, an inferior vena cava and a pulmonary vein.

47. (Previously Presented) A tissue ablation device as claimed in claim 44, wherein the member comprises a collapsible member.

48. (Previously Presented) A tissue ablation device as claimed in claim 47, wherein the collapsible member comprises a collapsible loop structure.

49. (Previously Presented) A tissue ablation device as claimed in claim 44, wherein the ablation element comprises an energy emitting structure.

50. (Previously Presented) A tissue ablation device as claimed in claim 49, wherein the ablation element comprises a plurality of spaced energy emitting elements.

51-147. (Canceled)

148. (New) A catheter, comprising:  
a catheter body; and  
means, associated with the catheter body, for forming a lesion in at least a substantial portion of a circumferential region of tissue associated with an orifice of a vein that carries blood to an atrium.

149. (New) A catheter as claimed in claim 148, further comprising:  
a connector adapted to connect the catheter to an energy source.

150. (New) A catheter, comprising:  
a catheter body including at least one energy transmission line; and  
means, operably connected to the at least one energy transmission line, for simultaneously coupling a continuous circumferential region of tissue that surrounds an orifice of a vein that carries blood to an atrium to energy from the at least one energy transmission line.

151. (New) A catheter as claimed in claim 150, further comprising:  
a connector adapted to connect the at least one energy transmission line to an energy source.

152. (New) A catheter as claimed in claim 150, wherein the at least one energy transmission line comprises a plurality of energy transmission lines.

153. (New) A catheter, comprising:

a catheter body; and

means, associated with the catheter body, for expanding within an atrium, contacting a circumferential region of tissue that surrounds an orifice of a vein that carries blood to the atrium, and forming a continuous lesion in the circumferential region of tissue.

154. (New) A catheter as claimed in claim 153, further comprising:

a connector adapted to connect the catheter to an energy source.
